Women in construction take to TikTok to showcase discrimination they face

Women in Construction Week

ANGELA GISMONDI STAFE WRITER

omen construction workers are taking to TikTok and social media to show the prejudice, discrimination and sexism they face in their workplace every day, encouraging each other to speak up and showcase their competencies in the industry.

A study was released recently by Workwear Guru, an online publication providing apparel reviews, comparison articles and sizing tutorials for everyday workwear, just ahead of Women in Construction Week which runs until March 12.

Millions of videos have been uploaded to TikTok by women in construction. Workwear Guru analyzed the most used TikTok hashtags by female construction workers and categorized what women expressed as problems within the industry. The comments led to the key takeaways and findings.

"We reviewed hundreds of videos on Tik-Tok published with #womeninconstruction and #womenintrades hashtags," Lindsey Garrett, a communications officer at Workwear Guru explained in an email to the Daily Commercial News."We mapped out the discrimination women face and the frequent comments they receive in their workplace from the videos?

The key findings from the study included the construction industry has a male-dominated culture; women construction workers face gender-based discrimination; women construction workers are consistently undermined; and women in construction have poor working conditions.

As part of the study, the team also interviewed female workers who are also TikTok users.

"Through interviews with construction women, we explored in-depth the challenges and difficulties women within the industry experience, how they feel about the industry, what advice they have for women who want to enter the industry, and what they think can be done for women to have a better working environment in construction," Garrett stated.

The personal stories of the women they interviewed reflect the issues within the industry, Garrett explained.

'Women continue to be subjected based on their appearance,' Garrett

Continued from Pg. 1

"In our question of what women can offer to the industry, they shared similar opinions such as problem-solving skills, empathy, a different way of thinking, multitasking and so on," said Garrett. "Moreover, through the advice they share with other women who want to join the industry, they show that they don't regret the path they've chosen, that it is totally worth it, and that challenging the industry stereotypes has made them stronger."

Interviewees included Morgan Ventos, a general contractor from Arizona; Cecelia Leger, a tile installer in Nebraska; and Britney Mroczkowski, a contractor from Florida.

"People are often surprised when they see me show up to jobsites, and sometimes I feel like I have to prove myself," said Leger.

"I feel the pressure needing to prove that I'm just as knowledgeable as the men on the team," Mroczkowski stated. "There were times when I met subcontractors or other vendors on the construction site and they were shocked to hear my title or role in the project. However, after speaking with them for a few minutes they would usually relax and realize that I did in fact know what I was talking about."

One of the stats included in the study was Women in Con-

struction annual research revealed that almost <u>half of the</u> <u>women (47 per cent)</u> believed the male-dominated culture is the main reason women leave the industry and 38 per cent considered outright discrimination as the cause why women quit.

"As seen in the plethora of videos, women continue to be subjected based on their appearance," Garrett noted. "You're a girl, you're too pretty to be working such a dirty job, 'stop acting like a guy,' or 'girls can't work in construction,' are common comments women construction workers receive. This male-dominated culture creates a toxic environment for women to work as they habitually get catcalled by their peers."

Women in construction also suffer from poor and unfair working conditions.

"Women consistently get paid less than their male counterparts," Garrett pointed out. "For example, according to the Bureau of Labor Statistics, women construction managers earn 75 cents for every dollar a male construction manager makes. Moreover, women working in construction and extraction occupations earn 79 cents for every dollar their male coworkers earn."

All-women Reina team breaks ground on Toronto condo project

TORONTO

Reina, Canada's first all-female development team, has reached a major milestone as the developers prepare to break ground on their Toronto condo project.

The project team is led exclusively by women in leadership roles across all disciplines. The team celebrated the launch with a small gathering of their consultants at the sales centre on the Queensway in Toronto, stated a recent release.

Amenities of the condo build include a gym and fitness studio located by the kids' playroom with windows for parents to keep an eye on their children, a hobby room, a snack shack born from a consultation with the Girl Guides, a soundless room for meditation, a library, parcel room, a games room and a community room.

Reina is led by Taya Cook, director of development with Urban Capital and Sherry Larjani, president of Spotlight Developments.

Consultants include Sahar Borodinas (electrical engineer, MCW Consultants), Wendy Chase (surveyor, R. Avis Surveying), Frances Hahn (interior designer, BDP Quadrangle), Mara Nicaolou (construction, Urban Cap-

ARLINGTON, VA.

U.S. construction spending increased in January compared to both December and a year ago, with strong gains in private nonresidential and residential construction but mixed results for public spending, according to an analysis of federal spending data the Associated General Contractors of America released recently.

"Private nonresidential construction, especially for manufacturing plants, has rebounded sharply in recent months, while demand for housing remains strong," said Ken Simonson, the association's chief economist, in a statement. "But public projects have yet to grow consistently."

Construction spending in January totalled \$1.68 trillion at a seasonally adjusted annual rate, 1.3 per cent above the upwardly revised December rate and 8.2 per cent higher than in January 2021. Private residential construction spending rose 1.3 per cent in January from a month prior and 13.4 per cent from January 2021, while private nonresidential construction spending increased 1.8 per cent from December to January and 7.3 per cent from January 2021.

In contrast, public construction spending rose 0.6 per cent for the month but slipped 1.3 per cent from the year-ago level.

Among residential segments, single-family construction added 1.2 per cent over the December total and 15.4 per cent year-over-year. Multifamily construction inched down less than 0.1 per cent in January but rose 4.8 per cent from a year earlier. Spending on improvements to existing owner-occupied houses increased 1.8 per cent for the month and 13.7 per cent year-over-year. A surge in manufacturing construction, which gained

8.5 per cent for the month and 31.2 per cent year-overyear, accounted for the bulk of the private nonresidential pickup. In addition, the largest private nonresidential segment, power construction, rose 2.7 per cent for the month but trailed the January 2021 rate by 1.4 per cent. The next-largest segment, commercial construction, declined 0.5 per cent in January but jumped 18.0 per cent year-over-year, with year-over-year gains in each component: warehouses (up 22.4 per cent), retail categories (up 15.2 per cent) and farm (up 4.4 per cent). The construction industry's ability to build unity

The area of assessment criteria in a RFP could easily be a book on its own. Everyday questions arise when governments are writing RFPs, or contractors are responding to them.

Organizations function best when they are cohesive, when all parts of the organization work together as a single unit for the same purpose.

I am attending the Canadian Construction Association's (CCA) annual conference in Vancouver this week, which sets the perfect example of industry unity for the entire country.

I have attended this conference for several years and it has the feeling of a family reunion with everyone attending innovative sessions and engaging with each other with positive feedback.

An important reason for conferences like the CCA is to foster the right attitude within each organization.

As in the sports arena, a team functions well when there is a strong team spirit, where all members of an organization and industry identify with the goals that have been set and believe that all levels within the organization are working towards those goals.

Teams function best when decisions enjoy consensus support. Consensus means broad support across the organization and industry. Every organization must grapple with the question of how much support exists for a proposal before it is allowed to proceed.

A bare majority may satisfy many legal requirements, but the question remains as to whether it is wise to proceed where there is such a slim endorsement for an idea.

To ensure broad based support, many organizations employ a 70-30 rule, under which an organization will proceed with a major or critical proposal only if there is at least 70 per cent support for the proposal among those who are likely to be affected by it. To garner such a level of support, it is usually necessary for the most controversial elements their individual objectives.

When two or more organizations consider a co-operative venture, the CEOs of each need to ask themselves a number of pointed questions, both with respect to the role to be played by their own organization and that to be played by the prospective alliance partner.

Procurement Perspectives Stephen Bauld

Over the years, as a CEO, I have had to make these exact decisions. This is my top 10 list of questions to ask when entering a joint venture:

• What is each prospective partner seeking?

Why does the other organization wish to partner with the leader's organization? Why not another organization?
Are the goals of each

organization compatible? If not, where are there inconsistencies, can these problems be resolved?

• Are the cultures of the leader's organization and those of the proposed partner compatible?

• How will the proposed co-operative venture be managed? Are the management styles of the partners compatible?

• In what other alliances is the prospective partner involved? How have those partnerships worked out?

• Are other alliances of the prospective partner compatible with the proposed partnership?

• What strength does each proposed partner add to the intended partnership? How necessary is that strength? What is the cost of obtaining it? Is the benefit to be derived worth the cost?

Is the proposed partner the best possible fit for the role? Does the proposed partnership lay the groundwork for

Searching for successful strategies

Continued from Pg. 1

"We haven't done enough,' is the biggest understatement I am going to hear this week."

In the U.S., statistics compiled by Big Rentz, the New England Institute of Technology, the Bureau of Labor Statistics and others found women comprise 10.9 per cent of the construction workforce, up one per cent in two years, but only 2.5 per cent of trades in the field.

One study found women comprise five per cent of contractors and four per cent of construction managers.

In Canada, BuildForce Canada estimated in 2020 that of the nearly 1.1 million tradespeople employed in the industry, women made up five per cent. In 2017 BuildForce estimated women accounted for 12.4 per cent of the construction workforce nationally – 3.9 per cent onsite, 38.5 per cent off-site.

The OCS this year reported on Statistics Canada data on gender representation among apprentices in major construction trades, averaged from 2015 to 2019: bricklayer, one per cent; carpenter, four per cent; construction craft worker, five per cent; electrician, three per cent; plumber, two per cent; total, three per cent.

Advocates in the U.S. and Canada were asked: What practices and strategies do they feel have the potential to once and for all create a construction workforce where women feel welcomed and are able to contribute to their full potential?

Among their answers:

• Enforceable workforce targets. For 30 years New Brunswick's Arlene Dunn worked as a labour and employer organizer in Eastern Canada, with notable success putting together workforce deals that were able to achieve a high-water mark of female trades participation — 13 per cent, on the Hebron offshore oil project.

Today Dunn is a cabinet minister in the Government of New Brunswick.

"We're not progressing in terms of the percentage of numbers in the trades," Dunn said. "You have to start with real numbers...If you looked at the Enron projects, there are very, very rigid numbers with respect to what their requests were, and the expectations were around women entering the trades.

"So start with those hard numbers

and no excuses."

If there were no female ironworkers available, for example, the parties proceeded to train workers up to meet the contractual obligations.

"So we're not going to get into a situation where when we require women to be hired on the job that we don't say that we don't have them, that just wasn't an excuse."

• Accountability at the top. Dunn said the impetus to develop contracts with such exacting workforce requirements has to stem from the C-suite.

"You have to really have accountability. And you have to have people at the top who actually do want to make a difference. It's not something that's inspirational...it's people who are really committed to women in the skilled trades."

Those firms developed strong protection mechanisms to support women on worksites, Dunn said.

"Until other jurisdictions start doing the same thing, we're going to continue to have struggles."

• Support and networking programs. Sheila Ohrenberg of Nashville, Tenn. started out in construction as an assistant project manager 25 years ago and 15 years ago she and her sister founded their own company, Sorella Group, that specializes in carpentry as a subcontractor. She is now president of Women Construction Owners and Executives.

"Being at the top of a company and being a female construction owner, it can be lonely. They say it's lonely at the top," said Ohrenberg.

"When you're a female, you're not typically going out hunting with all the guys...Having peer groups among national construction owners is so important, because a lot of times you can think that only things are only happening to you. Then you get in a peer group and then you get to support each other."

• Supportive corporate culture. Ohrenberg raised two children as the CEO of Sorella and so understands the value of creating an inclusive corporate culture that understands the unique needs of families in the sector.

"When women are having children and wanting to spend time with their kids and take them to school... it's very, very difficult to have a very demanding job that you can't get away," she said, noting construction is cyclical with some times of the year especially busy.

"I've always worked for smaller companies that were family owned, and they understood that whether you're a male or female, you have children and you've got to take care of the kids."

• Reach them young. Texan Stephanie Garcia, an onsite quality manager with Rogers-O'Brien Construction in San Antonio, is an activist with the National Association of Women in Construction (NAWIC). Garcia supports a local program that offers free classes that serve as an introduction to the trades for young women. The girls obtain hands-on exposure to presentations on, for example, robotics in construction.

Garcia, who earned degrees in interior design and architecture and is recognizable on jobsites with her trademark pink construction helmet, also participates in a high school program called Bridging the Gap.

"I really enjoy going out there and talking to the all the young students. We tried to do a lot of that to get them interested," she said.

• Effective anti-discrimination measures. Kayla Bailey is a steamfitter and welder who has taken on the role of full-time project manager with Ontario Building and Construction Tradeswomen. She feels the trades are about to experience an "explosion" of interest among women.

But while initial interest many not be a problem, retention is a major hurdle, she said. Unfortunately, Bailey said, out in the field, where the number of women is miniscule, the vast majority of men are supportive but there is still an element of the Wild West.

"I have sat through dozens of diversity training meetings," she said. "And for some people, it does mean education and it changes attitudes but...I can tell you, just from my personal experience, that there is zero enforcement of these policies.

"We hear that from our trade committee as well. I wish the solution was as simple as your health and safety policy that has a gender lens. But really, if you're not enforcing it, you're really not going to make a change in the industry."

WHERE ARE WOMEN IN CONSTRUCTION? DATA COURTESY BUILDFORCE CANADA AS OF 2020

of a proposal to be reduced or eliminated.

If controversial elements are essential to the proposal's success or viability, they should be cut back to the limit of what is necessary. The 70-30 approach recognizes that unanimity is only rarely possible in a large group. However, it also reflects the need for broad based support for the idea that it is to be pursued.

Joint ventures and P3 projects explain why leaders often need to form strategic alliances with other leaders, or between respective organizations, in order to improve the chances of successfully implementing future expansion, such as the addition of new partners, or possible expanded or additional fields of co-operation?

It is not necessary to obtain a positive answer to each of the 10 questions. It is deeply troubling however, if most of the answers with respect to a proposed strategic partner or co-operative venture are negative.

Stephen Bauld is a government procurement expert and can be reached at swbauld@ purchasingci.com. Some of his columns may contain excerpts from The Municipal Procurement Handbook published by Butterworths.

Building the future of nuclear 🔆 Canadian Nuclear through responsible waste disposal

Artist's rendering of NSDF closure phase

adian Nuclear | Laboratoires Nucléaires oratories | Canadiens

Plans have been laid for the construction of a highly engineered radioactive waste disposal facility in Chalk River, Ontario, Canada. The facility is being proposed as a permanent and modern technological solution to an environmental issue that goes back almost a century.

Today, Canadian Nuclear Laboratories (CNL) is seeking the support of the industry and its supply chain to move this project forward and advance the future of waste disposal in Canada.

Canada's storied Chalk River Laboratories was established in 1944 on the Ottawa River, about 180 km (114 miles) from the City of Ottawa. An adjacent community, the Town of Deep River, was developed to support the site and remains home to generations of employees. The site is located on the traditional and unceded territory of the Algonquin Nation.

CNL is once again using leading-edge technology to put forward a long-term environmental solution. Taking guidance from domestic and international experience, CNL has proposed an engineered containment mound – the Near Surface Disposal Facility, or NSDF – as the solution for low-level radioactive waste at Chalk River Labs.

Waste management is a challenge facing the entire nuclear industry.

As a fundamental component in the revitalization of the Chalk River campus, the NSDF is critical to both the long-term protection of the environment and to the continued development of breakthroughs in nuclear science and technology.

"Chalk River Laboratories is undergoing a transformative change that will propel CNL into the forefront of nuclear research in Canada and the world. The Near Surface Disposal Facility is key to this revitalization," said Kristan Schruder, CNL Deputy Vice President of Environmental Remediation Management.

The proposed facility will include the construction of a highly engineered containment mound, site infrastructure and waste water treatment facilities. The project is estimated to cost C\$365 million. A skilled workforce of 225 to 300 people will be needed At CNL, we are committed and prepared to implement this modern solution to an old environmental problem.

to build it from the ground up. If CNL's proposal is approved by Canada's nuclear regulator, the Canadian Nuclear Safety Commission, construction of the NSDF is anticipated to start in the fall of 2022.

CNL has successful experience with the engineered containment design through the construction and operation of waste management facilities in the two Southern Ontario communities of Port Hope and Port Granby, located about 100 km (60 miles) east of Toronto on Lake Ontario. In 2021, CNL completed the closure of the engineered aboveground mound in Port Granby, with 1.3 million tonnes (1.4 million tons) of contaminated soil and industrial waste placed in the mound for safe, long-term storage.

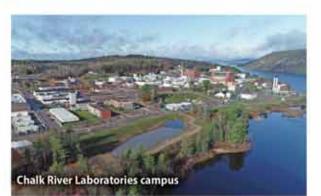

ore oranby, oritano, canada

The design of the second second

stay intact for more than a thousand years – much longer than the time it will take for the radioactivity contained in the facility to decay to a safe level.

The NSDF proposal is nearing the end of a five-year, federally regulated environmental assessment and the Canadian Nuclear Safety Commission has scheduled a public hearing starting in May of this year to consider CNL's proposal. Anyone can participate in the hearing process by submitting a written intervention or letter of support to the Commission by April 11.

Legacy waste management area at Chalk River Laboratories - 1960s

The design technology specific to the NSDF has been tested extensively. The facility will use natural and synthetic barriers that work together to isolate the waste from the environment for generations. Testing on the synthetic geomembrane done at Queen's University concluded the membrane will

Let's use our know-how to build a better future, together – say YES to NSDF.

The City is looking to hire a Contractor to repair sidewalks across the City of Mississauga. The scope of work under this Contract involves the removal and replacement of concrete sidewalks that are not meeting the City of Mississauga s minimum maintenance standards (MMS) and/or considered to be deficient by the City s Representative. The associated removal and reinstatement/restoration of concrete curb, asphalt roadway, residential/commercial asphalt driveways, tree roots and sod will be required to facilitate the sidewalk repairs. A large number of locations are affected by existing tree roots and as a result, the City expects an appropriate amount of labour and equipment be assigned to remove tree roots as outlined in the specifications and as directed in coordination with the City's For-Documents can be obtained at: estry group.

- TENDERS DUE, 24-Mar-22 at 2:00 PM ET. Solicitation #: RFQ 22-21A, RFQ 22-21B, RFQ 22-21C
- Owner: Limestone District School Board, 220 Portsmouth Ave, Kingston ON K7L 4X4 613-544-6920 Fax: 613-544-6804
- Owner only provides plans and specs to their prequalified contractors. Interested sub trades, manufacturers and suppliers should contact the prequalified contractors. This Request for Quotations (the "RFQ") is an invitation by the Limestone District School Board (the "Board") to prospective respondents to submit non-binding quotations for Kindergarten Yard Improvements at Cataraqui Woods Elementary School, Tennis Court Resurfacing at Napanee District Secondary School and Paving and Septic at Prince Charles Public School , as further described in Section A of the RFQ Particulars (Appendix D) (the "Deliverables"). (1) RFQ 22-21A Kindergarten Yard Improvements at Cataraqui Woods Elementary School: The project consists of the removal of identified sections of existing asphalt, including full excavation and earthworks for regrading and reinstatement of the removed sections and all utilities and equipment need to complete the work. The improved playground will have an expanded underground stormwater network, improved landscaping, and curbing providing a revitalized and improved playground for the kindergarten classes at Cataraqui Woods Elementary School, 1255 Birchwood Dr, Kingston, Ontario. (2) RFQ 22-21B Tennis Court Resurfacing at Napanee District Secondary School: This project is for the reconstruction of Tennis Courts located at Napanee District Secondary School (NDSS), 245 Belleville Rd, Napanee, Ontario. The project includes the removal of existing flexible pavement, fencing, and proper abandonment of an existing water service valve box. The project includes but is not limited to site work, placing and grading granular, paving, landscaping, fence installation, line painting, netting, and signs. (3) RFQ 22-21C Paving and Septic at Prince Charles Public School: This project includes the decommissioning and reconstruction of the main on-site wastewater facility for Prince Charles Public School located at 6875 HWY 38 Verona Ontario. This project will also include the removal of existing soft and hardscapes, flexible pavement, and fencing to accommodate the construction and removals. The site will undergo regrading on the south end of the school and renewal of the existing play yard allowing for several accessibility upgrades to the south,

- The Township of Minden Hills is seeking qualified bids to replace the Sedgwick Road Bridge. The work shall generally consist of the replacement of the Sedgwick Bridge as follows: Sedgwick Road Bridge Replacement The Sedgwick Bridge (MH#8) located on Sedgwick Road in Gelert, Ontario is a single lane cast-in-place concrete t-beam structure with an overall length of approximately 16.3 m. The structure was built in or around 1920. The Sedgwick Bridge will be removed entirely and replaced with a new pre-cast concrete structure with distribution slab and spread footings complete with wing walls, guiderail rehabilitation and asphalt Gelert Rail Trail Bridge for road reconstruction. Repair and Detour The Gelert Railway Bridge (#RT-2) located on the Haliburton Rail Trail has one lane within an approximate 3.8 m wide platform. The bridge is part of the recreational Haliburton Rail Trail connecting Francis Road to Cemetery Road. The bridge will be utilized as a temporary detour route for local traffic only while construction takes place at Sedgwick Bridge. Prior to road closure at Sedgwick Road Bridge, repairs, and modifications related to the existing Rail Trail Bridge deck components and safety barriers shall take place to provide a detour route. ROOF REPLACEMENT AT THE WASTE WATER TREATMENT PLANT ADMIN BUILDING AND GARAGE \$100,000 est LISTOWEL, Perth, ON 6115 Line 84, Listowel, N4W 0C8 TENDERS DUE, 23-Mar-22 at 2:00 PM ET. Solicitation #: NP-006-22T

Consult: Four Wide Design Ltd, 214 Burlington st., London ON N5Z 3W4 519-488-5437 Fax: 519-913-1666

Construction of a one-storey plus basement, roughly 28,500 sq ft addition, to the existing Base Lodge along with select renovations. Project also includes demolition. The purpose of the Construction sequencing is to outline how construction should progress to accommodate the continued operation of the existing Base Lodge through the 2022/2023 ski season. .1 From May 2022 - Nov 2022 the existing Base Lodge will continue to run as it does through off season operations with occasional functions and rentals. Some service disruptions are allowable as long as they are timed and coordinated with rental functions. .2 From Dec 2022 - March 2023 the existing Base Lodge will run and operate to support the ski season. Members will require full use of the existing Base Lodge facility and the slope side exterior Ski Storage Building. No service disruptions will be allowed during the ski season. .3 From April 2023 - October 2023 the contractor will have full control of the existing Base Lodge, site and the addition, with full access

and heating to the building in 2017. The Phase 2 Restoration of St. Mark's Church includes : a) Building a new addition to the west of the church to include bathrooms, a kitchen, storage and a new entrance b) Restoration of selected features of the existing church c) Associated interior finishes d) Associated Structural, Mechanical & amp; Electrical work e) Civil services (storm + sanitary), and f) Landscape improvements inclusive of storm water management, hardscaping, landscaping and plantings and driveway entrance from Hunter Street west. The following is a list of contractors that the City of Hamilton has pre-qualified under a separate procurement process specifically for heritage conservation work ("Heritage Contractor"): - Clifford Restoration - Collaborative Structures - Colonial Building Restoration - DJ McRae Contractors -Heritage Grade Architectural Restoration - Heritage Restoration - Limen Group Construction - Phoenix Restoration - Robertson Restoration - Roof Tile Management - Ultimate Construction Any heritage work, including: - Heritage masonry repairs

Building Reports

Award GC: Finnway General Contractors, Thunder Bay

Remove existing built-up roofing, insulation and

vapour barrier and replace with new fully adhered

EPDM roofing, increased insulation including slope

package, coverboard and vapour barrier. Scope of

work includes main roof, three penthouses, and

two lower roofs. Build-up parapets as indicated to suit new top of roofing elevation. - Existing copper flashing (green) must remain. Building is

Designated Heritage Building. Replace all parapet

copper flashing sealant. - Four new Roof Top Units

(RTU's) are present and cannot be moved/removed/

reinstated. New curbs for RTU's 1-4 have been pre-

pared to accept new EPDM roofing. - Other RTU's

and rooftop mechanical equipment and services

require temporary support, and build-up of curbs/

supports to suit new top or roofing elevation. Refer

to Environmental Procedures and Commissioning

related specifications for prescribed procedures. A Designated Substance Survey (DSS) was completed (see Appendix A) and identified asbestos in caulking present at the Freight Elevator Room penthouse base flashing location. Contractor must review the DSS. Asbestos abatement must be completed prior to construction, by a certified Contractor who must determine the risk level prior to abatement works. - Penthouse doors and frames will be cut down with new threshold installed to suit new top of roofing elevation. - Base flashings are to be removed and replaced around penthouses, existing parapets, roof penetrations, roof units. - Existing roof penetrations and services must be extended to suit new top of roof elevation. - Remove existing wood walkway and replace with new walkway pavers and additional walkway pavers as indicated on drawings. - Construct steel guards at parapets as indicated on drawings. - Provide insulation package drawing for review two weeks prior to installing roofing. Indicate insulation thickness at doors. Document is available at www.merx.com *Project is complete.

Start Date: 23-Jul-21; Completion by 29-Oct-21; This Report Date: 08-Mar-22.
